

CUSTOM EQUIPMENTS

Features

Custom-Engineered Lifting Equipment

OVP Group designs and manufactures custom lifting equipment tailored to your specific operational requirements. With decades of engineering expertise and a fully equipped production facility in Italy, we can develop bespoke crane attachments and lifting solutions that standard catalogue products cannot fulfil.

Our Custom Engineering Capabilities

- Bespoke load capacities and dimensions
- Special materials for extreme environments (offshore, chemical, high-temperature)
- Custom attachment interfaces for non-standard crane hooks
- Integrated safety systems and load monitoring
- Multi-function lifting frames and spreader

configurations

- Full CE certification and documentation for all custom products

Development Process

Our engineering team works closely with clients from initial concept through to final delivery. Each custom equipment project includes feasibility assessment, 3D design and FEM analysis, prototype testing, and full compliance documentation. We ensure every product meets EN and ISO standards before it leaves our facility.

Industries We Serve

We supply custom lifting equipment to construction, civil engineering, offshore, petrochemical, mining, and heavy manufacturing industries worldwide. Our equipment has been deployed on major infrastructure projects across Europe, the Middle East, and Asia.

Get a Custom Quote

Submit your technical requirements to our engineering team and receive a

detailed proposal within 5 business days.
We welcome enquiries for both single
units and series production.
